How to Create Signature and Sign Documents Directly on your iPhone or iPad

There are certain unforeseen situations, when you have to put your signature even if you are traveling. You get the soft copies on your iDevice, but the million-dollar question is: how to sign documents directly on your iPhone or iPad? Follow this simple method and you can sign up any document directly on your iPhone or iPad. There are two popular document readers: Adobe Acrobat Reader and Foxit PDF.
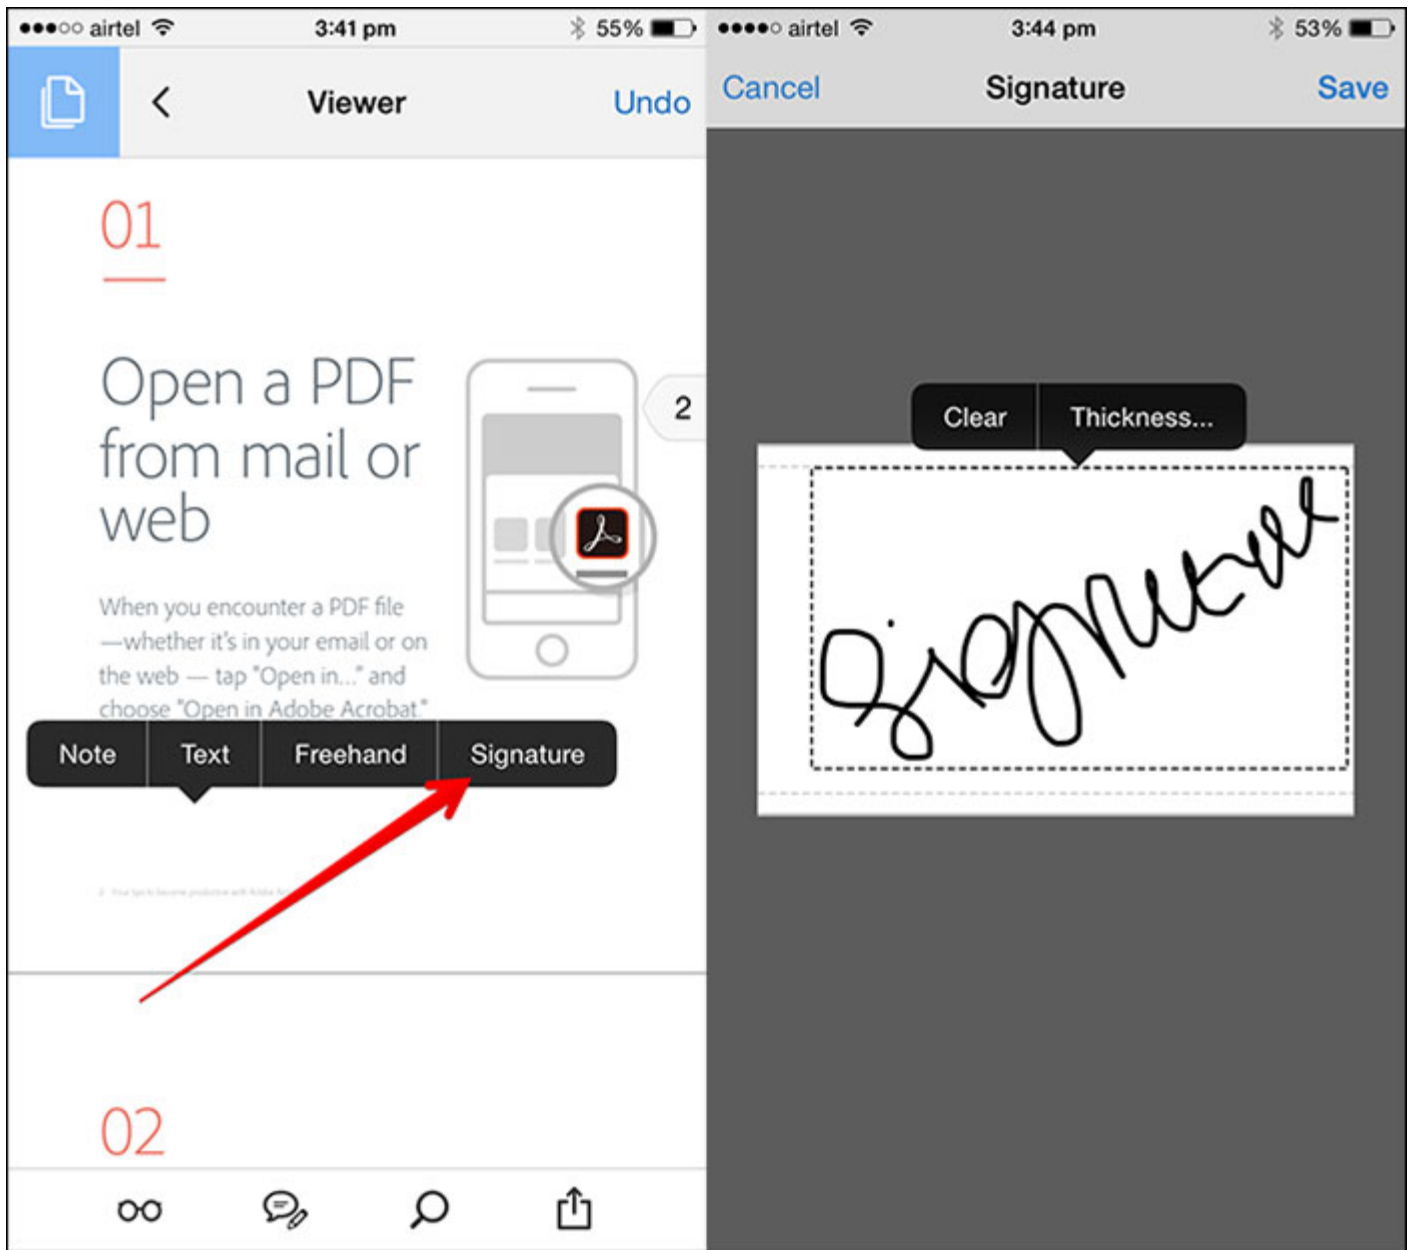

Step #1. First off, download Adobe Acrobat Reader from AppStore.

Step #2. Now you can open a document either from your email or from the device (you can open documents in Adobe Acrobat Reader from Notes, Dropbox, iCloud or from any other source).

Step #3. Press and hold your finger where you want to create your signature.

Step#4. A menu with four options will appear: Note, Text, Freehand and Signature.

Step #5. Tap on Signature (an open space will appear on the screen where you can create your signature with your finger or stylus).

Step #6. Once you are satisfied with the exact signature, tap on Save. Your signature is added to the document.
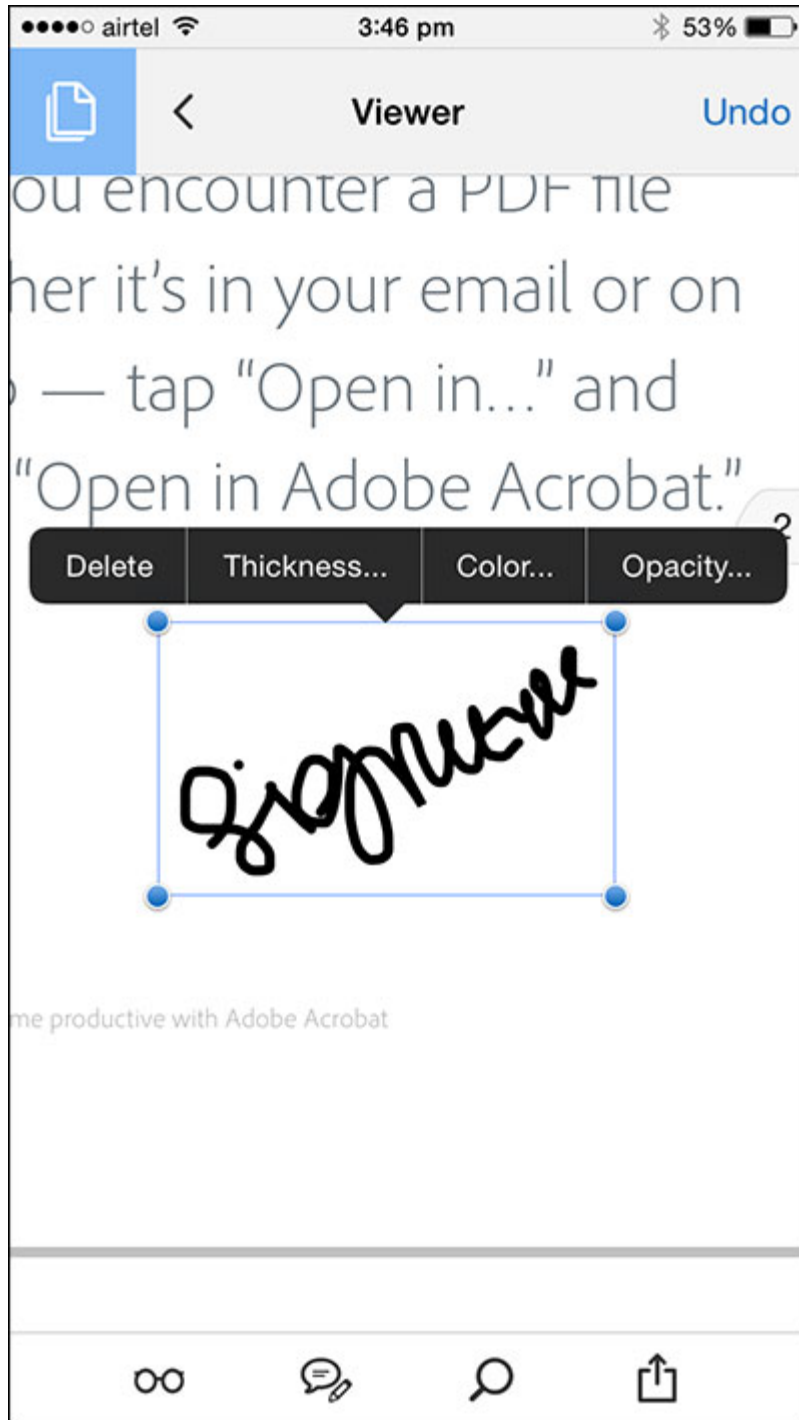

Note that you can also select Freehand to directly sign the documents. Moreover, you can add Note and Text to the documents.

How to Edit your Signature in Document from iPhone and iPad

If you want to make any change in your signature, you can follow this method.

Step #1. Gently tap on your newly created signature.

Step #2. Four options will appear on the screen: Delete, Thickness, Color & Opacity.

Step #3. Choose the option as per your editing requirement.

Once your signature is saved, you can save the document either in Notes or in Dropbox, from where you can resend the document with your signature. You can also print the document if your iDevice is attached with any printer through Wi-Fi.
